SINGULAR**

**Singularity is a fast top-down action
roguelike where **BLOOD** is your only
resource. You heal and reload by bathing
in what you spill. Doubt gets you killed —
so why is it the only way to break the
loop?**

Singularity is a fast top-down action roguelike where **BLOOD is your only resource. You heal and reload by bathing in what you spill, so hesitating means dying. But the loop that keeps you trapped only breaks when you start **doubting it.****

Design pillars

Four systems, one idea.

We love players who like hard, fast and mechanic-deep games, but we specially love when stories grow even deeper on them

Aggressive combat

Heal and reload only by spilling blood. Standing still kills you.

Combat mastery

Overheat, Trauma, dodge-combos. Easy to survive, brutal to master.

Narrative in motion

Cryptic, reactive story told between fights — never breaking flow.

Hunting bosses

Persistent Entities & Skip&Kill: bosses that stalk you across runs.

Growth You, your skill, and Ari grow by failing, dying, and pushing forward.

Mechanics

Attack, melee and ranged

Dash

Healing

OverClock

Combat depth

OVERHEAT

Punishes overcommitting — too much time on OverClock damages and stuns Ari. Forces decisions mid-fight.

TRAUMA

Punishes mistakes — a percentage of total received damage can't be healed in a few seconds. Errors matter. Perfect dodge and melee kills help to reduce it.

PERFECT DODGE

Rewards aggression — a frame-perfect dash and activating OverClock into an attack opens a combo window. Reduces Trauma and Overheat. High risk, high reward.

[INSERT COMBAT SCREENSHOT]

Annotate: Overheat bar · Trauma stack · Dodge flash

Three interlocking systems that reward reading the fight, not mashing buttons.

Aggressive combat

Every system pushes you to attack. Standing still is death.

Blood is your only resource

Heal and reload only by bathing in enemies' blood as it falls.

Waves hunt passivity

Enemies spawn depending on your position; camping triggers punishment waves.

No safe corners

Every wall is breakable — nowhere to hide, nothing to wait behind.

Speed is survival

Dash + Overclock chain attacks into relentless forward momentum.

Forced forward momentum — stop moving and you die.

Boss systems

Skip&Kill

When a boss room appears, you can skip it to reach harder rooms and better loot. Push deep enough, win a special fight, and you earn an Oxidizer — the only way to permanently kill that level's

Persistent Entities

Roaming super-bosses that can wander into any room. Huge HP pools and they leave after a few seconds — so you meet the same entity again and again across runs, slowly chipping it down.

Lore & Storytelling

Lore & Storytelling

Exploration & Ambiguity

Storytelling advances both by coincidences and exploration. We want to engage the player with ambiguity and to engage WITH the player by questioning.

Emotional Impact

Emotional impact through a deep reactive narrative that responds to the player's choices. Every character and boss has a flaw and a backstory.

Subtle Delivery

Quick dialogues and small cutscenes in specific moments. Avoid constant stops during gameplay.

Cyclic Meaning

Story about meaning and growth through failing, succeeding, dying and living. Understanding everything is cyclic.

Time, space & change

Tic-tac

Different lightning cycles, character availability and special fights give the feeling that time is passing. Nobody can escape the pass of time.

Movement

Ari and the rest of the characters are conscious of time and things that happen and will react accordingly.

Change as a process

Players will feel not only different room variations or storytelling arcs, but they will also feel how the different interactions, timings and little choices affect the world.

Art Direction

Art Direction

Four pillars that define how the game looks and feels.

World & Mood

A vast, empty, abandoned world. Melancholy, biology and mechanic.

Scale

Huge Bosses. Huge Scenarios. Huge amount of time.

Style

Handcrafted pixel art

Minimal UI

No regular UIs cluttering the screen.

A world you feel before you understand it.

Where we are

Most of the game is already built and proven.

Systems

Combat, enemies, stats, rooms and dialogue systems — almost finished.

Art

First level key elements done: player, bosses, enemies, environment.

Controls

Fully integrated controller. Steam Deck compatible.

Lower Risk

Proved systems and scalable pipelines (enemies, balance, room creation, dialogue...) for production.

Past the experimentation — ready to scale to production.

What we need money for

Where your support takes the game to the finish line.

Funding of the final content

More bosses, levels, enemies, guns, full lore & dialogues.

Final Art

Funding to deliver the full, final art pass.

Go-to-Market

Marketing, wishlists, community and key illustrations.

Polish

QA, localization and the final layer of shine.

Funding turns a proven prototype into a finished game.

The team

Deliberately small, built for this production

Diego de la Peña

More bosses, levels, enemies, guns, full lore & dialogues.

Anastasiya

Marketing, wishlists, community and key illustrations.

To-hire musician

QA, localization and the final layer of shine.

Core Team + Contractors + Extra Freelance support. Proven work pipelines with a milestone-based payment

So, why is Singular relevant?

Present, future and breaking the loop

Even though the gameplay and rhythm are extremely fast, Singular was born with a sudden stop and a question, 'Where am I and where am I going?'.

We live in the fastest changing world humanity has ever seen, we don't know where technology is taking us in the next 3 months, and we can't even guess how is life going to be in the next 10 years. And yet, we are more number, lonelier and more trapped in ourselves than ever.

Singular talks about technology and its consequences on us, it talks about the purpose a lot of us can't find and how time no longer feel ours. It talks about breaking the loop, growing through pain, accepting what we don't want to accept, falling and fighting back, fighting the status quo and the barriers we put in ourselves.

I could have written a book, but I prefer to give players the chance to defeat the snake themselves.

Singularity in the dictionary: A point, event, or condition so exceptional or extreme that the ordinary rules or frameworks governing the situation cease to apply or break down entirely.

Thank you

Singularity

sin · gu · lar · i · ty /ˌsɪŋ.gjʊˈlær.i.ti/ noun

1. The quality or condition of being singular, unique, or one of a kind; remarkable individuality or distinction.
2. A point, event, or condition so exceptional or extreme that the ordinary rules or frameworks governing the situation cease to apply or break down entirely.
3. A point in space-time at which gravitational forces cause matter to have infinite density and zero volume, where the known laws of physics cease to be valid; most commonly encountered at the center of a black hole.
4. (Often ***the Singularity***) A hypothetical future point in time at which artificial intelligence surpasses human intelligence, triggering runaway technological growth and transforming civilization in ways that are fundamentally unpredictable or incomprehensible to current human minds.
5. A point at which a given mathematical object — such as a function or a curve — is not defined, or where it fails to be well-behaved in some particular way (e.g., a discontinuity or an infinite value).

Etymology

From Late Latin *singularitas*, meaning "uniqueness" or "solitariness," derived from *singularis* ("single, alone, unique") + the suffix *-itas* (forming abstract nouns). First attested in English in the 14th century, initially in the sense of "the quality of being separate or unique."

Synonyms & related

uniqueness, exceptionality, peculiarity, anomaly, rarity, distinctiveness · See also: infinity, black hole, superintelligence, discontinuity

VOID / SINGULAR

Design pillars

Aggressive Combat

Combat is based on speed and taking risk, so every single decision we take is focused on making players risk everything they have. Some examples are that almost all walls are destroyable, enemy spawns are based on player positions, punishment spawn hordes...

Deep twisted narrative without interrupting gameplay

Narrative and worldbuilding Will help to set the tone for everything. We want to represent an introspective journey. But we don't want to break the game Flow!

Focus on growth

We do a trifecta with personal growth and discovery. The player, the gameplay skills and Ari Will grow together. They Will struggle, fight, cry die and win together all the times. This process of personal, narrative and gameplay evolving is what we want every player to experience. We firmly believe that videogames are not only games but a vehicle to travel and

Having Deep complex mechanics allow us to attract different levels of mastery on players. Completing the game should be possible for any kind of player if the focus is on playing better, but hardcore players can experience the game on a whole different level

Detailed mechanics

Bosses

Boss fights have to be an important part of the game, both with gameplay and narrative.

Apart from the normal end-of-the-level boss fight we have 2 new systems, and Persistent Entities

We are targeting:

- Action enjoyers
- Hardcore gamers / Speedrunners
- Narrative enthusiasts
- Indie Experimental players

Lore & Storytelling

Lore & Storytelling

Narrative and storytelling

Player finds its own pace in order to respect the game Flow. Narrative enjoyers can talk and talk and talk, but once you want to play, everything has to be quick.

Using a Deep narrative we aim to create emotional impact in players rather than keeping a lot of randomized elements. This narrative is reactive and very often not linear.

Quick dialogues are the vehicle for narrative. Everything has to be cryptic and players have to put everything together themselves. Many questions are asked, but again, is players work to answer

Story is about growth and meaning. Ari learns how to be a human by living, dying, failing and succeeding. From following orders to maturing and making her own decisions. This connects a lot with gameplay, both during fighting and exploring the world. Taking risks and learning Will help Ari and the player to avoid obstacles and find something worth living for.
